

# Mining Personal Data (part 1 of 3)

- Compiling results from people search sites, social media, public records, etc
- Google dork queries, and the google docs trick
- Utilizing Buscador (the OSINT Linux VM) and it's tools: maltego, recon-ng, Spiderfoot, Metagoofil, theharvester, Sublist3r, creepy, and other tools such as drizzy's dox tool, etc
- Utilizing social engineering to acquire information from a target and reading body language

PowerPoint and sources are listed on my site: [vm-deus.tech](http://vm-deus.tech)

I've been interested in OSINT for a little over 2 years, the purpose of this presentation is to showcase what I've learned, and pass it on to those who are interested.

By the end of this presentation you will be able to (not exactly in this order):

- Identify/trace a phone number.
- Identify/trace usernames and email addresses.
- Locate and link social media profiles.
- Gather details such as D.O.B, known aliases, family info, friends, addresses, and vehicle details.
- Acquire public records such as court records, marriage and divorce records, name changes etc.
- Find ownership of a website, and get an IP associated with a site.
- Search public database leaks for usernames/passwords/IP addresses.
- Acquire IP addresses and perform a trace.
- Identify place of employment and search for resumes/learn about educational history.
- Perform a VIN search based on license plate, identify what vehicle someone drives, and look up license numbers.
- Also much more.

# What is a dox? Compiling vs “doxing”?

- a dossier of personal information on someone.
- “Doxing” is the act of compiling (but not always releasing) this information.

# People search sites:

- Pipl (for names, aliases, phone numbers, usernames, addresses, family, emails, age, career, social media profiles)
- Truepeoplesearch (for names, phone numbers, addresses, family, emails, age)
- Familysearch (For d.o.b, name, address history, relatives/family, maiden names)
- Zabasearch (name, address, partial phone number)
- Spokeo (free info includes: partial addresses, names, partial phone numbers, partial emails)
- Mylife (d.o.b, political party, income, net worth, full name, partial emails)
- Radaris (free info: name, aliases, age, known locations, workplace)
- Whitepages (name, aliases, partial address history, relatives, partial numbers, mobile carrier/provider)
- Fastpeoplesearch (name, d.o.b, phone numbers, addresses, aliases, past addresses, relatives, and associates, summary)

SEARCH ▾

\* LOGIN

Name, Email, Username or Phone

Location (optional)

## Search Over 3,153,373,886 People

With the world's largest people search engine, Pipl is the place to find the person behind the email address, social username or phone number.

### Business Solutions

Search by name, email, username, or phone number.

This is by far my favorite site.

Feedback

Pipl also has a useful API that we'll talk about on my site ([vm-deus.tech](http://vm-deus.tech)).

The results are often fairly detailed, containing details such as name, usernames, phone numbers, addresses. Social media profiles, date of birth, current place of work, past education, emails, relatives, and known associates.

# TruePeopleSearch

Name	Reverse Phone	Reverse Address
e.g John Smith	City, State or Zip	<input type="button" value=""/>

© 2018 TruePeopleSearch.com - [Phone](#) - [About](#) - [Terms](#) - [Privacy](#) - [Contact](#)

People: A B C D E F G H J K L M N O P R S T V W Y

Often has addresses and emails that Pipl might not have, and it is the better place to look for a current address. It also lists phone numbers and relatives, as well as age, and emails. Search by name, phone number, or address.

My second favorite overall.

## See & Improve Your Reputation Score. Check Out Anyone Else's

Reputation is more important than credit. Only MyLife provides Reputation Scores based on public information gathered from government, social, and other sources, plus personal reviews written by others.

Find Any Reputation Score

First Name

Last Name

City or Zip

SEE REPUTATION SCORE

### Improve Your Reputation Score - Improve Your Life Get Ongoing Reputation Score & Background Report Monitoring

With more than 300 million searches every day, it's critical to look your best to people looking at your Background Report & Reputation Score. So you'll get alerts whenever your information is viewed or changes.

Mylife can give you information that no other people-search site can. For example, political party affiliation, income, net worth, (D.O.B is usually listed here as well in case one isn't able to find it elsewhere and doesn't want to have to check public records). Middle names will be included and partial emails, as well as partial address and partial phone numbers.

Last in my top 3.

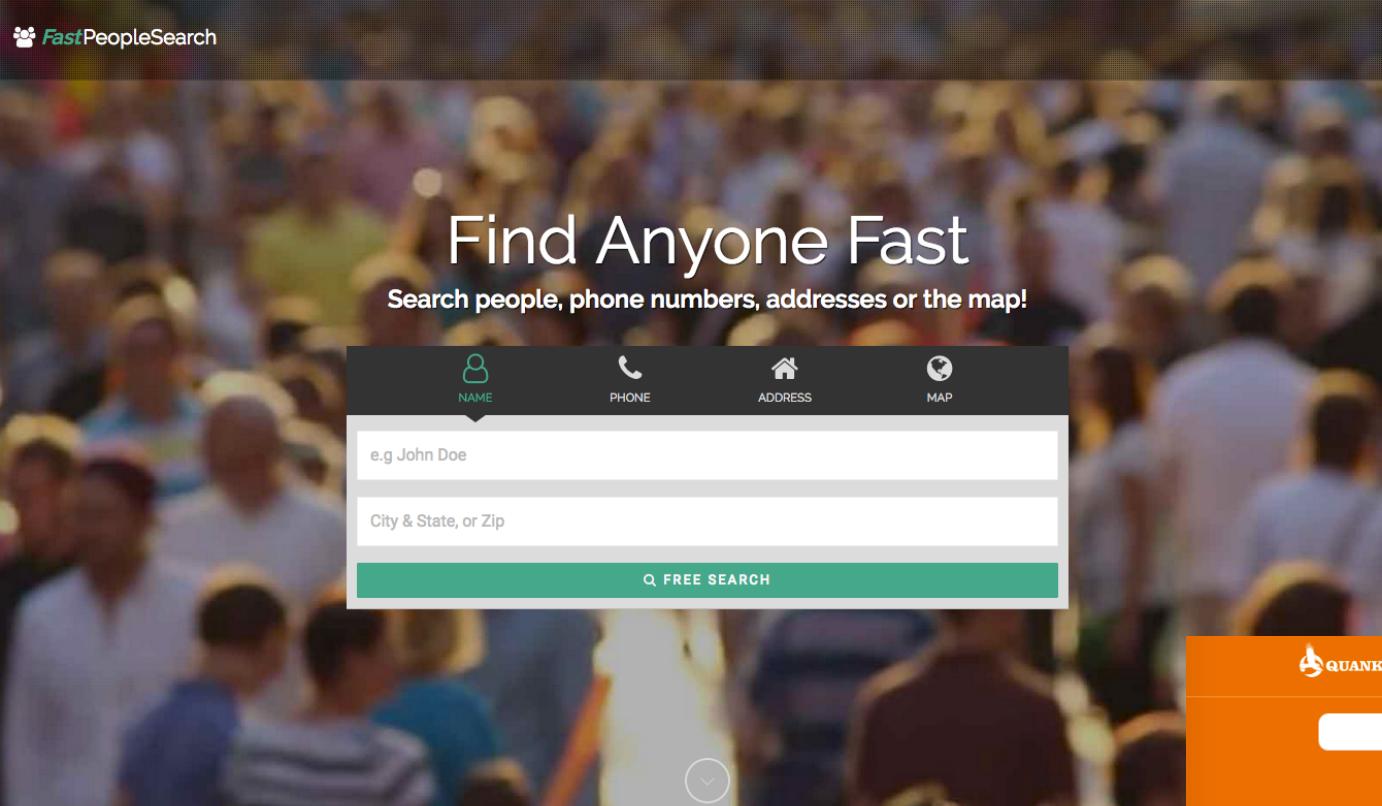

Adrien Crenshaw from Irongeek doesn't think this site or Zabasearch is very useful.

I say he's clearly wrong.

Bazzell included mylife in his Open Source Intelligence book.

# Find Anyone Fast

Search people, phone numbers, addresses or the map!

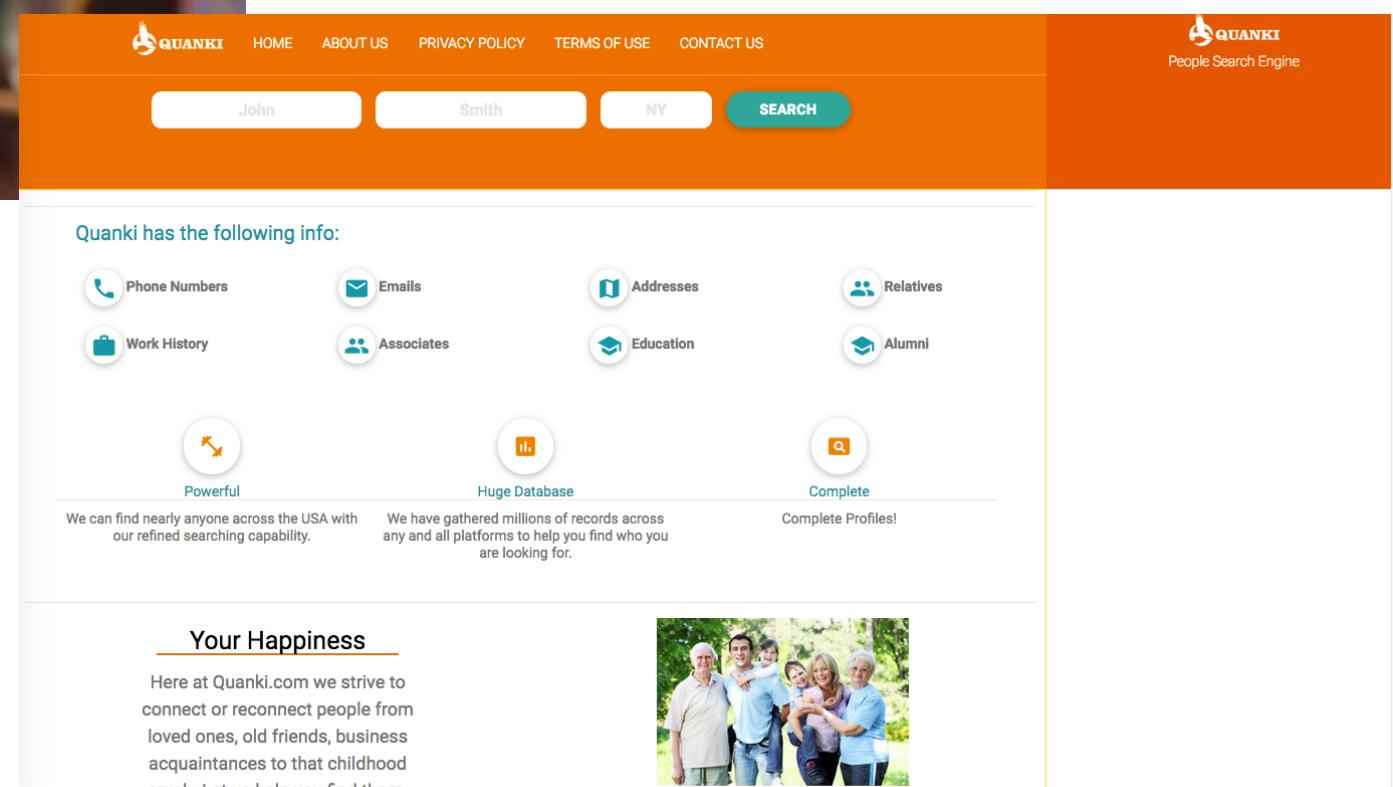

The search interface features a dark header with four tabs: NAME (selected), PHONE, ADDRESS, and MAP. Below the tabs is a search bar containing "e.g. John Doe". Underneath is another input field for "City & State, or Zip". At the bottom is a green button labeled "FREE SEARCH".

Quanki also has comprehensive results like fastpeoplesearch, and also lists known highschool and work history.

Fastpeoplesearch: This site is also excellent. Provides name, D.O.B, phone numbers, addresses, aliases, past addresses, relatives, and associates. Also provides you with a short summary of this information.

I might tie this one with truepeoplesearch.

The Quanki homepage has an orange header with the logo and links to HOME, ABOUT US, PRIVACY POLICY, TERMS OF USE, and CONTACT US. Below the header, there's a search bar with fields for "John", "Smith", and "NY", followed by a "SEARCH" button. The main content area starts with a section titled "Quanki has the following info:" with icons for Phone Numbers, Emails, Addresses, Relatives, Work History, Associates, Education, and Alumni. Below this are three circular icons labeled "Powerful", "Huge Database", and "Complete". The "Powerful" icon says "We can find nearly anyone across the USA with our refined searching capability." The "Huge Database" icon says "We have gathered millions of records across any and all platforms to help you find who you are looking for." The "Complete" icon says "Complete Profiles!". At the bottom left is a section titled "Your Happiness" with text about connecting people from childhood to adulthood. On the right is a photo of a family.

Radaris is one of the ones that charge, but you can get name, aliases, age, and workplace without paying and partial info. Partial info includes: known locations. Search by name, address, or phone number.

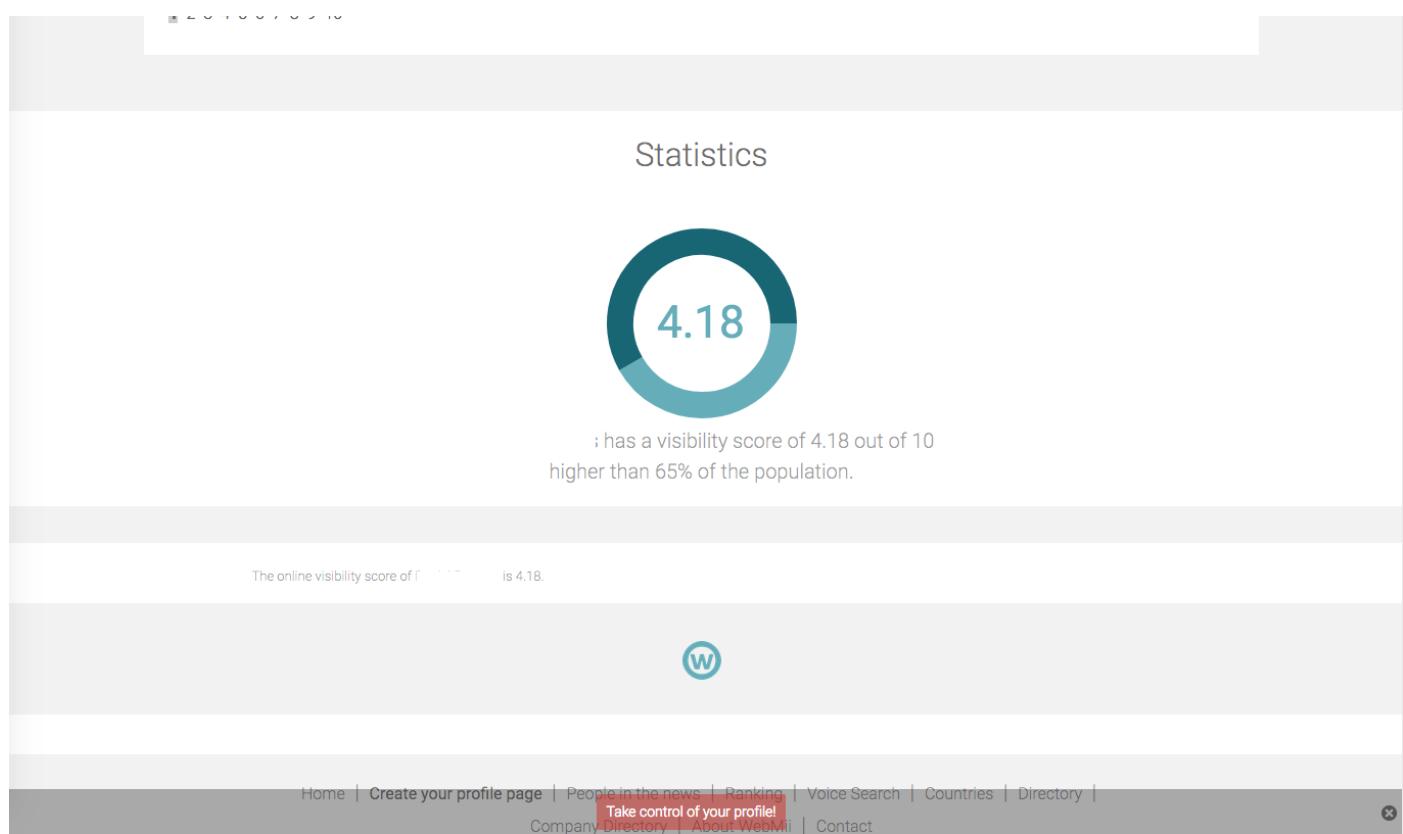

## What is Radaris?

Radaris is a comprehensive public records search engine for information about people, properties, businesses and professionals.

Radaris provides access to information about people, properties, businesses and professionals, available as one-time reports and subscriptions. We are the industry's provider of the most comprehensive profiles sourcing data from the nation's largest providers and dynamically integrating these profiles with social mentions, factual references and

SEARCH

### What is Spokeo?

Spokeo is a people search engine that organizes white pages listings, public records and social network information into simple profiles to help you safely find and learn about people.

<https://www.spokeo.com>

Spokeo also makes you pay, but provides partial information that's useful. Especially in terms of who lives where. If you search a partial address, like a street name and check each number on that street, you will see a partial name such as B\*\* S\*\*\*\* as the resident, if you know who you're looking for (in this case let's say Bob Smith) on the street, this makes finding them easy. Especially if you know they live with someone named Jane Smith. They will show up in the same house listed as B\*\* S\*\*\*\*, and J\*\*\* S\*\*\*\*.

It doesn't take a genius.

Collection Title

[Browse all published collections](#)

Familysearch is at the bottom of the list even though it's useful because now they have you make an account. The search is free though and provides details on name, address history, and family. You can search by name, and marriage, birth, residence, death. You can also search with a relationship: spouse, parents and other person. You can search by country and limit results.

I use this to get more information on who someone is related to, and for maiden names.

# Finding and Tracing phone numbers

- Spydialer (hear voicemail, see name, see approximate location) (my favorite)
- Vedbex (phone to skype, phone resolver, see name, see linked skype account)
- Truecaller, callerIDtest, text magic, open cnam, usphonebook
- Partial numbers from people search sites and social media

## WHAT IS THE SPY DIALER REVERSE PHONE LOOKUP?

Our phone number search now works with cell phones AND landlines!

Spydialer is one of my favorite resources, it will display the number of the owner and the general area of the phone. One interesting feature of Spydialer is that it lets you listen to their voicemail if their number is mobile and not a landline or landline ported to a cell. You can save this audio file as an mp3. The “people” option will list a person if it finds them and their neighbors. Put in an address and it will tell you who lives there. Email option will “sometimes” have a first name.

## Caller ID Made Simple

THE ONLY GLOBAL CARRIER-GRADE CNAM SOLUTION.

 +1 678-631-8356

ENTER A PHONE NUMBER TO TRY OPENCNAM PLUS.

```
curl 'https://api.opencnam.com/v3/phone/+16786318356?account_sid=SID&auth_token=TOKEN'

{
  "name": "TEL0",
  "number": "+16786318356",
  "price": "0.0048",
  "uri": "/v3/phone/+16786318356"
}
```

Textmagic, CallerIDTest, and OpenCNAM provide number lookups, but textmagic provides the best detail on VOIP numbers.

Usphonebook is also a valuable resource, it lists address and known relatives and associates. Most importantly it lists the mobile carrier. It also lists the most current location/address of who owns the phone. For example, I checked a number with a California 650 area code, but it correctly told me that the phone/user is in Carmel, IN.

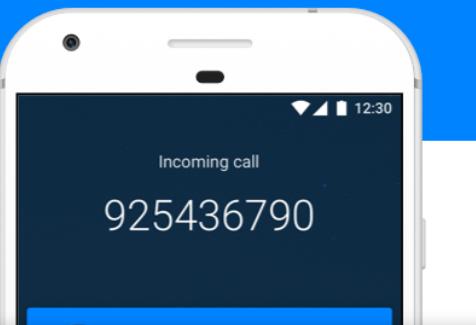

## Look up any phone number

Trusted by 250 million users

US +1 ▾

Top reported spam number in your area right now:

(281) 816-1372

This is really an interesting site and app, truecaller builds its database based on the contacts that you give it. For someone's information to be here, another individual who has your name and number listed in their contacts would have to give this app access to their contacts. It's a network or database that you/the user contributes to.

Also, literally just call a number and ask:

You: "Is this\_\_?"

"No. Wrong number."

You: "Look I'm sure this is the right number, who is this???"

You can just use a Burner/VOIP and disguise your voice with Morphvox Pro. (Video on that coming later)

# Search Social Media

This isn't rocket science. Social media is the first place that you should look. Search by name, usernames, and when the option is offered, search by email and phone number. If you can't find them look for their relatives, then look through their friends list. Also pay attention to their friends and childhood friends, look through their profile and friends list. The most popular and commonly used sites (to name a few) are:

Facebook, Instagram, Twitter, Pinterest, Flickr, Youtube.

Have a few fake profiles that you use, maybe make a fake profile of an individual's friend and send them a friend request, or make a fake profile and friend someone's friend so it will show that you have mutual friends when you send your target a request.

Search for their Amazon user page and Skype profile too.

Don't forget to check Myspace, a lot of people still have their old Myspace profile up.

We'll get into searching dating sites, on my blog at [vm-deus.tech](http://vm-deus.tech).

## Reset Your Password

How would you like to reset your password?

-  Email me a link to reset my password  
d\*\*\*\*\*@hotmail.com
-  Text me a code to reset my password  
+\*\*\*\*\*39

No longer have access to these?

 Continue 

Using the “recover account option” for Facebook, you can input a name to find an account and see what partial email and number is linked to it, if you can figure out the rest of the partial info search again but this time using that info to check if the search brings up that same user. If someone wants you to think they changed their number but they still have it linked to Facebook, well, they’re not that smart or they think that *you* aren’t.

This helps you find a number or email, too. We now know that the current number we are looking for ends in “39” so if there are a lot of numbers listed for an individual to sort through, you’ll know which one it most likely is.

If the email was [m\\*\\*\\*\\*\\*n@gmail.com](mailto:m*****n@gmail.com), I would use the google docs trick to check if it’s [markwilson@gmail.com](mailto:markwilson@gmail.com), and then I would “recover account” using that email to see if it brings up this screen with the email visible. We could do the same thing for the phone number.

# Find Anyone's Email:

Instantly find and verify any email address. Just enter the first name, last name and the domain ([www.company.com](http://www.company.com)) of the company they work for. We will do the hard work of finding their email address and contact information for you.

[GET STARTED NOW](#)

Find any email address now!

SIMPLY THE BEST

## When Speed & Accuracy Matter

[Leave a Message Here](#)

One way to find an email:  
Findanyemail will allow you to put in a name and domain and give you the results of verified emails.

You can check these using Google Docs.

If you also know how many characters are in an individual's email and you only know some of them but think you have an idea of what the others are (just not which order they're in), you can use a character generator that lets you specify what characters the string starts and ends with. Ex: [g\\*\\*\\*\\*\\*w@gmail.com](mailto:g*****w@gmail.com),

I have an idea of what the characters in the middle might be, but I'll keep the two at the end the same and generate the possible combinations for the inner characters and check the emails on Google Docs.

When you go to share a Google Doc, and enter the Email of the user you want to share it with, you will see the name associated with their account. See how one of the “username@domain.com” belongs to Babet?

This helped me find an Email that belongs to someone with a common name. She had both her and her husband’s name in this field.

(Example: “Beth and Paul”)

She also linked the email to other emails and a phone number that I knew belonged to her.

Not the sharpest crayon in the box.

# Google Docs Trick

- 💻 457,962,538 Anti Public Combo List

My website will offer an archive of public database leaks, they aren't up yet but check later.

Stop paying for these.

vm-deus.tech

For database leaks involving an email:

Haveibeenpwned should be the first place you check, it will tell you if your email has been compromised in a breach, and tell you where it was compromised. You can then check a site like leakedsource.ru for the info, or just download the database free (if it's public). You can trade for a DB if you can't find it (and if you have anything to offer). A site that gives you slightly better results than haveibeenpwned is hacked-emails.com.

The screenshot shows the main page of the Have I Been Pwned website. At the top, there is a navigation bar with links to HOME, VERIFIED LEAKS, LATEST DATA LEAKS, API, and ABOUT THE PROJECT. Below the navigation is a large banner with the text "Has my email been hacked?" and a subtext "Anonymously check if your email has been compromised and help us verify the validity of possible breaches". There is a search input field labeled "E-mail address" and a purple "CHECK" button. Below the banner, there are three cards with statistics: "6.243.874.660 addresses", "137.498 leaks found", and "533.341 new emails". Each card includes a small icon (envelope, lock, chart) and a descriptive subtitle. At the bottom, there is a footer note about cookies and privacy policy, followed by a "Ok" button.

## THOUSANDS OF UNIQUE DATABASES

If you want to know what car someone is driving, you can use progressive auto quotes, if you put in the address, it will tell you what cars are registered at this address and sometimes offer pictures of the cars. You can use fake info for the name and D.O.B.

Thanks Flo!

I also found a site that will list what car someone owns from a name search, but I lost it. 😞

I will include it on my site later.

This often indicates that a vehicle owner has transferred his or her license plate from vehicle to vehicle. For instance, five years ago you may have purchased a Toyota sedan and you recently traded it in for a Honda SUV and kept your current license plate. Both vehicles will be tied to the same plate.

If multiple records are returned, simply select the vehicle record from the drop-down box and get the report. Then begin enjoying all of the unique benefits of choosing a vehicle history report from Experian Automotive to help you understand, compare and select the right vehicle.

No VIN? Check the vehicle history with a license plate and state instead.

**FREE Vehicle Search:  
Enter a Plate**

Two ways to find the vehicle history you're looking for:

## CALCULATING A DRIVER'S LICENSE NUMBER

Alan De Smet wrote programs that you can use to calculate your license number based on your personal information, or determine your personal information from your driver's license number. So far, it can do this for Florida, Illinois, and Wisconsin. Check it out at:

[highprogrammer.com/alan/numbers/dl\\_us\\_shared.html](http://highprogrammer.com/alan/numbers/dl_us_shared.html)

He states that the information *may* be wrong as it's still in beta.

It's good enough For Michael Bazzell of the FBI's Cyber Crimes Task Force to include in the latest edition of his OSINT book, so it's good enough for me. It worked in correctly calculating my friend's license number.

Be shook.

# Manipulating Mapillary: Show me that plate!

Mapillary and openstreetcam offer crowd-sourced, street-view images. Enabling satellite layer displays images from the open street map project. While in any map view, colored lines indicate that an individual has provided street-level images to Mapillary or Open Street Cam. Clicking these lines reveals street view images and expanding these images allows you to navigate through that individual's images similar to the Google Street View experience. In some of the images, the service seems to redact license plates with a "blur box." A few feet later-the box disappears and a partially legible plate is revealed. We can use selective cropping and photo manipulation to obtain the plate. Crop and invert the colors.

## Case Search (beta)

Search for non-confidential cases in Indiana courts that use the Odyssey case management system. This site replaces the [original version](#) previously available at mycase.in.gov.  
[Tell us what you think](#) of the new site.

Search by: [Case](#) [Name](#) [Attorney](#)

Citation Number

-or-

Cross Reference

Court

Limit search to

Criminal & Citation  
 Civil  
 Family  
 Probate  
 Appellate  
 Commercial

[Advanced Search Options](#)

Unfortunately virtualgumshoe has closed down, they used to be a free public record directory popular among private investigators and law enforcement.

Each state deals with its records differently. For example, Indiana stores a large part of its court records and crime logs online at mycase.in.gov. Looking at party details will often give you details such as address, height, weight, full name, and date of birth.

Name changes must be made public and one can search for those, if you know the county you can also search local newspaper archives, when you change your name this info will be published. You can search by state and county to find marriage and divorce records (and a name change). Search county for crime logs. Universities generally have their own public crime logs which sometimes list the home address of whoever files a report, although this is getting phased out. Search crime watch mapping.

## Employee Compensation by Unit

The Certified Report of Names, Addresses, Duties and Compensation of Public Employees (Form 100R) provides taxpayers with compensation information for public employees of state government, state universities, state boards and commissions, and all local units of government.

Search

The NEW virtualgumshoe, blackbookonline compiles of list of resources to make your job easier. Search by name or record type, and you'll be redirected to links that may contain that information.

Basically, it just lists public record sites.

Dead useful.

You can also find out an individual's salary, Indiana uses this site:

[https://gateway.ifionline.org/report\\_builder/Default2.aspx?rptType=employComp](https://gateway.ifionline.org/report_builder/Default2.aspx?rptType=employComp)

**OR, FIND FREE PUBLIC RECORD LOOKUPS:**

EXAMPLE: DALLAS JAIL INMATES

The screenshot shows a web-based Geographic Information System (GIS) for the City of Carmel, Indiana. The main map displays streets, landmarks, and bodies of water. A central modal window titled "City of Carmel GIS" contains a "Disclaimer" section with legal text about the use of the site. Below the disclaimer is a message stating "Last Acknowledgement: none found". At the bottom of the modal is a button labeled "I have read, understood, and agree to the above terms". To the right of the main map, a legend titled "Crime Watch" lists five categories: Burglary (light blue circle), Criminal Mischief (dark blue circle), Damage to Property (orange circle), Theft (yellow circle), and Theft Of Motor Vehicle (red circle). Below this, a separate section titled "Business Crime Watch" lists four categories: Burglary (red square), Criminal Mischief (purple square), Fraud/Deception (pink square), and Robbery (green square). The legend also includes a "Feedback" link and the City of Carmel seal.

Some counties have Crime Watch Mapping. Input an address to see exactly who lives there and their parcel number. You can also see their neighbors and who lives around them as well as reported crime. Use the parcel number to look at property records.

You can also search a county's police department site to find known sex offenders in an area, if you suspect the individual may be an offender.

Arrest Information For The People

Search

When an arrest is made Jail.com is the first to deliver arrest information to the public.

Jail.com is the most comprehensive source for finding arrest records. Search by name, city, or county. Subscribe to our daily arrest alerts for your local jail or get notified if a family member or friend gets arrested. Browse the archives for any jail or sheriffs office to find past records and mugshots. Jail.com was set up to provide easy access and free arrest records for friends, family, reporters, and victims of arrested persons.

*“If I don’t need to use it, why include it?”*

**Don’t say that you’ll never need it.**

If you suspect the individual you’re investigating may have been arrested, and you want a mugshot:

Jail.com lets you search by name to see arrest records and mugshots.

**You don’t usually need this site, because you can just search the county’s site to lookup current inmates, but it’s a good site to know about.**

The screenshot shows a county website's inmate lookup section. On the left, a sidebar titled "CONNECT WITH US" includes links for Facebook, Twitter, NextDoor, and a "Directory". Below these are links for "Animal Control", "Citizen Requests", "Citizen's Academy", "Citizen Satisfaction Survey", "Compliments & Complaints", "Daily Incident Log", "Divisions", "Lookup Current Inmates" (which is currently selected), "Most Wanted", "Neighborhood Watch", "Project Lifesaver", "Records", "Recruitment", "Sex Offenders Search", and "Sheriff's Sale". The main content area has a header "Current Inmates" and a search form with fields for Name, Subject Number, Booking Number, and In Custody status. It also shows booking dates from 02/27/2018 to 02/28/2018 and a Housing Facility dropdown. Below the search form is a table listing 15 inmates with columns for Photo, Name, Subject Number, and Gender. The names listed are Barber, Marquise Alexander; Berg, Daniel Richard; Bolin, Austin Douglas; Carpenter, Iteionna Lashey; Christensen, Benjamin Andrew; Coffman, Alison Renee; Crenshaw, Loyd Nolan; Davis, Jamarcus Demond; Douglas, Brianna Angelic; Ecock, Christian Armand; Ellison, Terriann NMN; Garcia Arias, Eva Laura; Gentry, Michael Anthony.

Photo	Name	Subject Number	Gender
	Barber, Marquise Alexander	139400	Male
	Berg, Daniel Richard	140991	Male
	Bolin, Austin Douglas	139483	Male
	Carpenter, Iteionna Lashey	134451	Female
	Christensen, Benjamin Andrew	144142	Male
	Coffman, Alison Renee	46958	Female
	Crenshaw, Loyd Nolan	143002	Male
	Davis, Jamarcus Demond	135519	Male
	Douglas, Brianna Angelic	107874	Female
	Ecock, Christian Armand	118194	Male
	Ellison, Terriann NMN	131390	Female
	Garcia Arias, Eva Laura	146470	Female
	Gentry, Michael Anthony	129393	Male

The screenshot shows the Indeed.com website with a search bar for resumes. The 'what' field contains 'job title, skills, or company' and the 'where' field contains 'indiana'. Below the search bar are options to 'Limit search to: Job Titles Skills Companies Field of Study' and a link to 'Advanced Search'. A message below the search bar says 'Fast, simple resume search.' On the left, there's a sidebar titled 'Resumes you may be interested in:' listing various job titles and locations such as 'Adjunct Professor - Danville, IN', 'Adjunct Graduate Professor - Indianapolis, IN', and 'Adjunct Instructor of Music - Whitestown, IN'. At the bottom, there are links for 'Post a Job - Reach 200 million job seekers' and 'Indeed also offered in: español'.

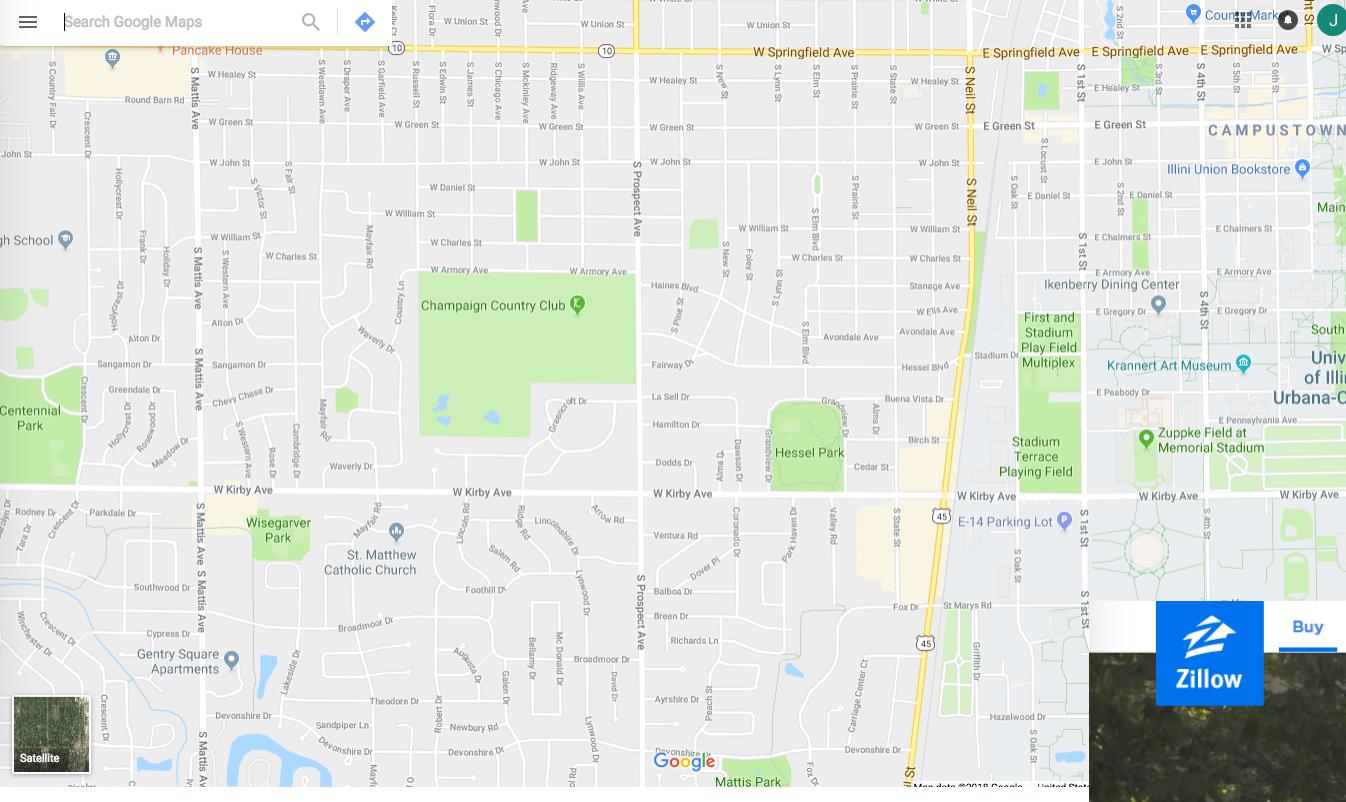

you check can voter registration status online, too. You need a full name, D.O.B and county of an individual to look up their status.

It will display their name + initial of their middle name along will be displayed with the registration results, that helps if you can't find it elsewhere.

Indeed.com lets you search for an individual's resume. To search by name, and to reveal names, you have to create an account.

You can also search by job title, skills, field of study, or company, and location

The screenshot shows the IN.gov Voter Portal. The main header says 'IN.gov Voter Portal'. Below it, a sub-header says 'Voter Portal'. On the right, there are icons for home, info, help, and login. A large modal window is open with the heading 'Tell us about yourself.' It contains fields for 'First Name', 'Last Name', 'Date of Birth', and a dropdown menu for 'County' with the option '-- SELECT --'. Below these, there's an 'Optional' section for 'Indiana Driver's License Number'. At the bottom right of the modal is a yellow 'Submit' button. In the background, there's a blurred image of a person holding an American flag.

Real estate sites like Zillow generally have pictures of **inside** and outside the house listed online, along with more details of the property, *such as if it has a security system.*

To acquire more details of an address and surrounding area, use google maps. Street view is great to get a good look at a house.

PACER  
PUBLIC ACCESS TO COURT ELECTRONIC RECORDS

HOME REGISTER FIND A CASE E-FILE QUICK LINKS HELP CONTACT US RSS Login

Public Access to Court Electronic Records (PACER) is an electronic public access service that allows users to obtain case and docket information online from federal appellate, district, and bankruptcy courts, and the PACER Case Locator. PACER is provided by the Federal Judiciary in keeping with its commitment to providing public access to court information via a centralized service.

**PACER Case Locator** UPDATED PCL OFFERS NEW FUNCTIONS, FEATURES  
Click here to learn more about improvements to the PACER Case Locator.

**NEXTGEN CM/ECF** **CM ECF**  
The Federal Judiciary has developed a Next Generation (NextGen) Case Management/Electronic Case Files (CM/ECF) system that will allow you to use the same account for both PACER and electronic filing access.  
More information on the improvements to PACER and CM/ECF is available. Check back for updates as courts go live on the new system.  
Click here if you received a notice about NextGen CM/ECF from a federal court or just have questions about NextGen CM/ECF.

## RECAP Project – Turning PACER Around

RECAP is an online archive and free extension for Firefox and Chrome that improves the experience of using PACER, the electronic public access system for the U.S. Federal District and Bankruptcy Courts.

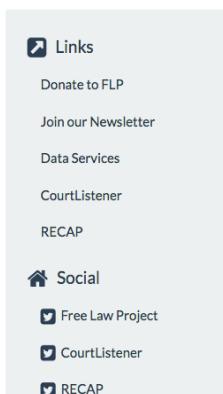

The archive contains the millions of contributions from our users, every free opinion on PACER, and extensive content from our data consulting projects. It can be queried on CourtListener.com and is available via our APIs for journalists, researchers, or developers.

Visit the RECAP Archive

Read about the RECAP APIs

The RECAP extensions are very simple to use and have no configuration. They:

- Help you give back by contributing to a public archive.
- Save you money by showing you when free documents are available in the archive.

PACER which stands for Public Access to Court Records, is a public access service that allows users to obtain case and docket information online from federal appellate, district, and bankruptcy courts, and the PACER Case Locator, for a small fee of \$0.10 per page. PACER Holds more than 500 million documents. No fee will be owed until a user accrues more than \$10 worth of charges in a calendar year. \$3 max charge for access to any single document other than name searches, reports that are not case-specific, and transcripts of federal court proceedings.

RECAP allows users to automatically search for free copies during a search in PACER, and to help build up a free alternative database at the Internet Archive. Recap is available as a Mozilla Firefox add-on and Google Chrome extension. For each PACER document, the software will first check if it has already been uploaded by another user to the Internet Archive. If no free version exists and the user purchases the document from PACER, it will automatically upload a copy to the Internet Archive, thereby building the database

There is a possibility you can recover it from your browser cache if you have visited the page recently, here's how to do that in Google Chrome.

Enter this into your Chrome browser address bar: **chrome://cache**

This should bring back a list of all cached pages.

Find the pages you want and select the link. This will return something that looks like the image to the side.

This is full of binary data and not readable.

To convert this back into its html format, copy all of the data and visit the URL listed here. This site has a handy tool for 'viewing chrome cache data'.

<http://www.sensefulsolutions.com/2012/01/viewing-chrome-cache-easy-way.html>

# Welcome to my Website. I'm Deus.

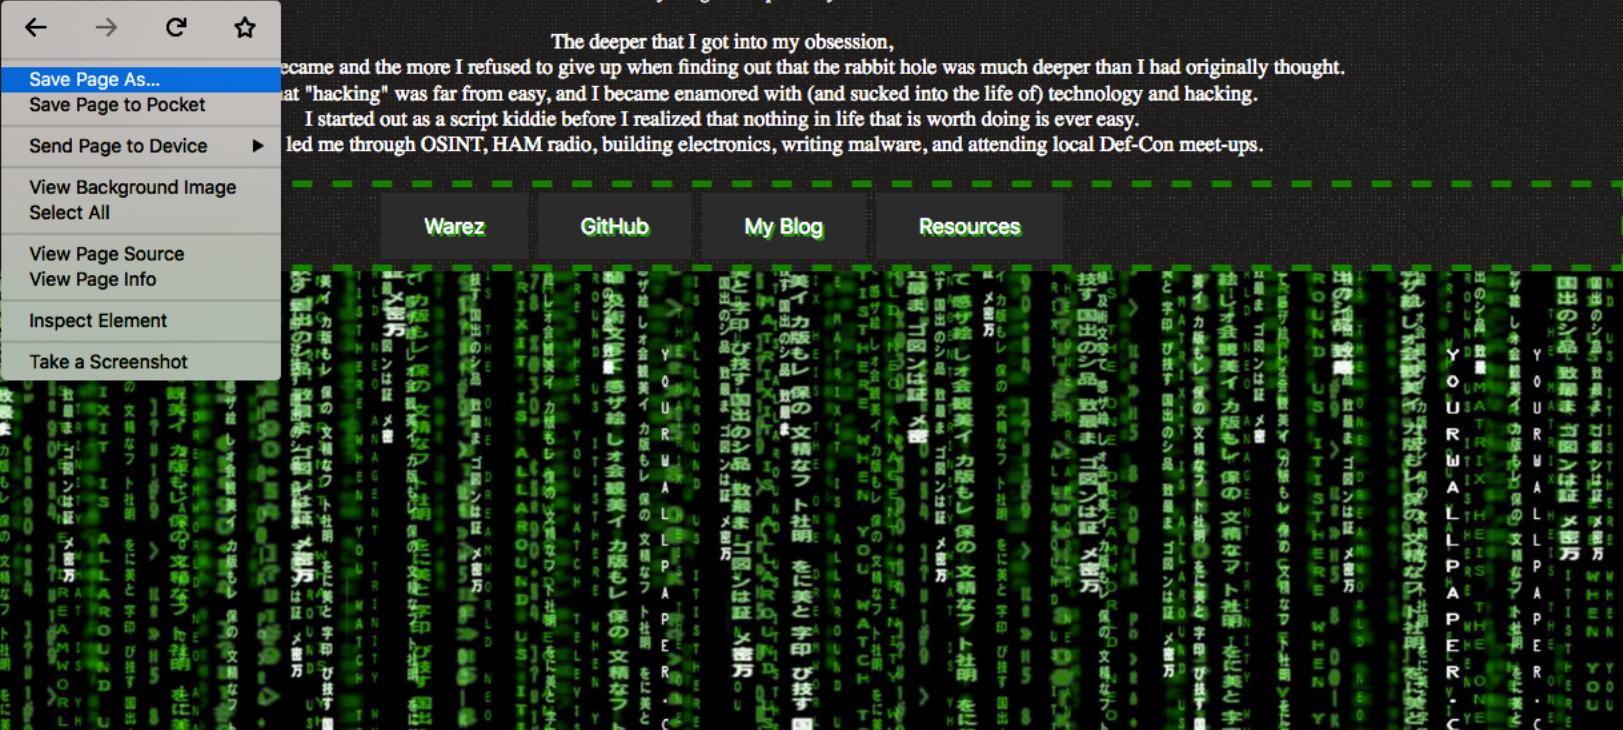

## My Hacking Journey as a Neophyte

I have always been interested in computers, and interested in hacking. With three of my family members being programmers and one family member being an IT Admin, my interest was innate. However, I began my journey with only one goal in mind:

*Learn everything that I possibly can.*

The deeper that I got into my obsession, the more I refused to give up when finding out that the rabbit hole was much deeper than I had originally thought. At "hacking" was far from easy, and I became enamored with (and sucked into the life of) technology and hacking.

I started out as a script kiddie before I realized that nothing in life that is worth doing is ever easy. It led me through OSINT, HAM radio, building electronics, writing malware, and attending local Def-Con meet-ups.

Just save the page.

If you want a copy of a page, just right click and save it, you can view the copy offline.

You can also use HTTrack to download an entire website, I'll demo this in the Buscador tutorial.

# tracing an IP address

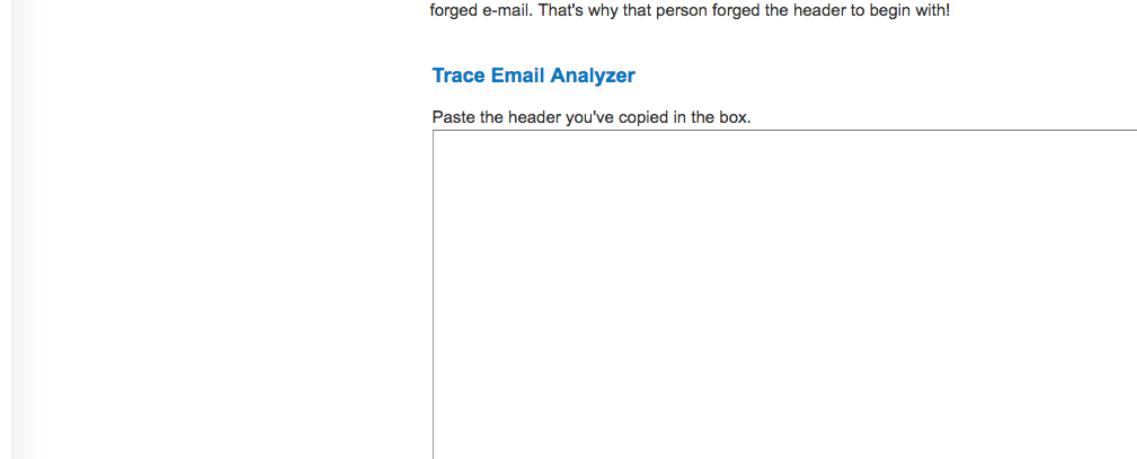

Email headers are no longer that useful in acquiring an IP address, most individuals use sites like gmail or yahoo, these services do not disclose the IP address of an individual in their email headers. According to Bazzell, *users that send emails within a desktop client such as Outlook are still vulnerable.*

Check an email header for an IP address at:

Whatismyipaddress/trace-email

>>*But how do I get their IP?*

Try an IP logger?

Example of an email header

```

Viewdns identifies the path that viewdns took from their servers to the target IP address, this can identify addresses of servers that were contacted trying to establish a connection to the target's address. The numbers after the addresses indicate the number of milliseconds each "hop" took. It can also translate a domain name into an IP address, and conduct a port scan to check for commonly open ports.

# How to search: google dorks

*site*: returns files located on a particular website or domain.

*filetype*: followed by a file extension returns files of the specified type, such as DOC, PDF, XLS andINI. Multiple file types can be searched for simultaneously by separating extensions with “|”.

*inurl*: followed by a particular string returns results with that sequence of characters in the URL.

*intext*: followed by the searcher’s chosen word or phrase returns files with the string anywhere in the text.

**Data and database file extensions are particularly useful, I search for an email or name and then filetype:**

**.csv** - Comma separated value file

Put search terms in quotes, ex: “username”  
filetype:csv

**.dat** - Data file

**.db** or **.dbf** - Database file

Search for strings together, ex:  
“this string” + “another string”

**.log** - Log file

**.mdb** - Microsoft Access database file

**.sav** - Save file (e.g., game save file)

Remove unwanted search results with (-),  
ex:  
“homework question” -chegg

**.sql** - SQL database file

**.tar** - Linux / Unix tarball file archive

**.xml** - XML file

Shodan Developers Book View All...  Explore Enterprise Access Contact Us New to Shodan? Login or Register

# The search engine for Security

Shodan is the world's first search engine for Internet-connected devices.

Create a Free Account Getting Started

## Explore the Internet of Things

Use Shodan to discover which of your devices are connected to the Internet, where they are located and who is using them.

## See the Big Picture

Websites are just one part of the Internet. There are power plants, Smart TVs, refrigerators and much more that can be found with Shodan!

## Monitor Network Security

Keep track of all the computers on your network that are directly accessible from the Internet. Shodan lets you understand your digital footprint.

## Get a Competitive Advantage

Who is using your product? Where are they located? Use Shodan to perform empirical market intelligence.

  
**56% of Fortune 100**

Shodan is used around the world by researchers, security professionals, large enterprises, CERTs and everybody in between.

  
**1,000+ Universities**

There are a lot of popular search engines, but other than Google and Shodan, I'll try Yahoo, Bing, Gigablast, and duckduckgo.

Shodan is a search engine that lets you find specific computers (routers, servers, etc) using a variety of filters. Shodan indexes “banners” (metadata that a device sends back to a client).

You can find servers, routers, online storage devices, surveillance cameras, webcams, and VOIP systems.

Shodan maps lets you conduct searches based on location alone and Shodan images displays collected webcam captures from open devices.

I like to look at traffic/surveillance cams and webcams.

**WHOXY**  
DOMAIN SEARCH ENGINE

Whois API / Whois History / Reverse Whois

Our [Whois API](#) returns consistent and well-structured WHOIS data in XML & JSON format. Returned data contain parsed WHOIS fields that can be easily understood by your application. Along with Whois API, we also provide API access to [Whois History](#) and [Reverse Whois](#).

**UNBEATABLE  
LOW PRICE  
GUARANTEE!**

With support for 2026 TLDs, our cloud-based API lets you quickly access any domain's WHOIS data through [Bulk Whois Lookup](#), Newly Registered Domains, Dropped Deleted Domains, Expiring Domains and [Whois Database Download](#).

**Live Demo**   [Whois Lookup API](#)   [Whois History API](#)   [Reverse Whois API](#)

**Reverse Whois**

Simply enter a search term below to see the list of domain names owned by them.

Owner Name  Enter a person's full name... **GO**

**Reverse Whois API**

Search our entire WHOIS database through the Reverse Whois API.

<http://api.whoxy.com/?key=xxxxx&reverse=whois&identifier=value>

Reverse Whois API lets you perform a comprehensive search on our database, to find domains owned by a company or person.

Whois will tell you who a site belongs to, as long as that individual does not have privacy protection. IP of the host, address, and phone number is generally listed.

<http://geekreport.stream> will also tell you the IP of the host, the name the site is registered in, number of other sites linked to, and common mistypes.

简体中文 English Français Русский Español العربية Portuguese

**ICANN WHOIS**

**WHO Registered That?**

ICANN's WHOIS Lookup gives you the ability to lookup any generic domains, such as "icann.org" to find out the registered domain holder. Help us continue to improve WHOIS and share your thoughts!

**Enter a domain** **Lookup**

**About WHOIS**  
Learn about the history of WHOIS. Read up on technical documents

- [History of WHOIS](#)
- [Technical Overview](#)
- [Using WHOIS](#)
- [Glossary of WHOIS Terms](#)

**Policies**  
Research the various policies and governing documents on WHOIS

- [Registration Directory Services \(formerly WHOIS\)](#)
- [Policy Review](#)
- [Implementation](#)

**Get Involved**  
Learn about how you can become more involved with WHOIS

- [Public Comment](#)
- [Working Groups](#)
- [Follow a Mailing List](#)
- [Attend a Public Meeting](#)

**WHOIS Complaints**  
See something wrong? ICANN handles WHOIS complaints on Inaccuracies and Unavailable Services

- [WHOIS Inaccuracy Complaint](#)
- [WHOIS Service Complaint](#)

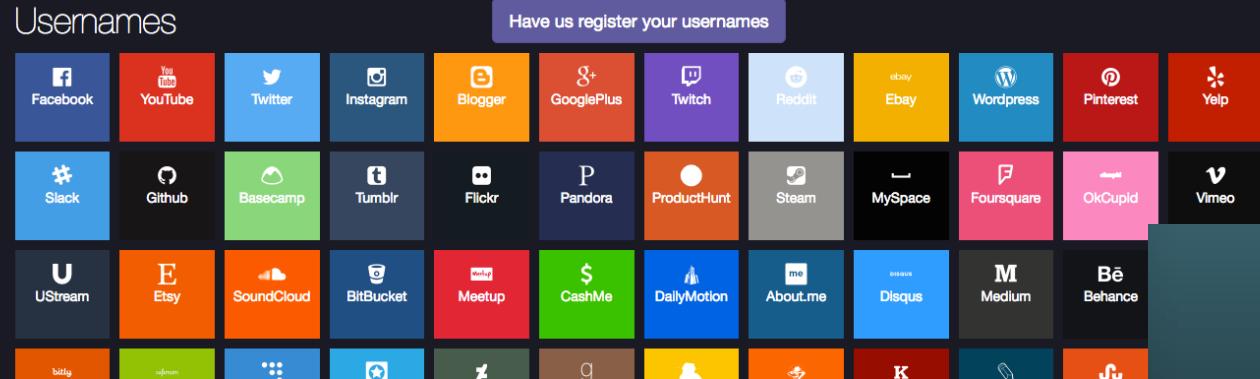

If you want to see if someone has a website registered in their name, whoxy will list sites associated with an individual. Simply input their name.

## Domains

.com	.net	.org	.co	.biz	.io	.at	.us	.me	.co.uk	.eu	.info
.xyz	.ca	.be	.it	.am	.so	.tv	.la	.fr	.life	.ch	.ms
.jp	.name	.pro	.work	.social	.guru	.ninja	.bar	.auto	.place	.club	.in

Click an **available** domain to purchase it. Click an **unavailable** domain to make an offer for it.

## Usernames

Have us register your usernames

Feedback

When searching for usernames, namechk and knowem will tell you if they're "available" on other sites, so you can see if someone is using the same username on other popular sites.

Search over 500 popular social networks, over 150 domain names, and the entire USPTO Trademark Database to instantly secure your brand on the internet.

enter name here

Check It

## What is this?

KnowEm allows you to check for the use of your brand, product, personal name or username instantly on over 500 popular and emerging social media websites. Grab your name and secure your brand before someone else does.

## Reverse Image Search

Search by image and find where that image appears online

Upload or enter Image URL

[How to use TinEye](#)

Use TinEye's fast and accurate image  
recognition with your own images.

Also search images for EXIF data and Metadata.

If you want to trace an image or picture, or see if there are other copies up somewhere else, do a reverse image search. I like TinEye best, but Google Images is also useful.

**Google**  
Images

The screenshot shows the homepage of Metapicz.com. At the top, there's a navigation bar with 'home' and 'link' buttons. The main header is 'metapicz [VIEW YOUR METADATA]'. Below the header, there's a green banner with the text 'Something to prove on the go? Try Securo Mobile for iPhone and Android'. Underneath, there are two blue buttons: 'easytimestamping.com protects your intellectual property' and 'Integrate metapicz in your blog with our wordpress extension.' The central part of the page has a large grey area with the text 'Drop image files here' and 'or select'. Below this, there's a smaller section with the text 'or enter the picture URL' and an input field labeled 'Insert picture URL' with a 'GO!' button next to it. At the bottom of the page, there are links for 'terms', 'privacy', 'about', and 'contact'.

Metapicz.com lets you check an image for EXIF data/metadata. There are easy to find sites that will check any type of document.

FYI: Flickr is one of the only sites that does not remove EXIF data from photos. Other sites like Facebook do.

## Metadata:

Most digital documents contain additional hidden data known as meta data, which stores information such as who created the document, what the document is about, any comments about the document and many additional pieces of information depending on the document type and the software used to create or modify it.

## EXIF Data:

Exchangeable image file format data aka EXIF meta data is information about a digital image. This can be anything from the resolution and amount of colors in the image to the type of camera used to take the picture and on what day and at what time, or the software used to create the image. Flickr does not remove this data.

# Radio Frequency Monitoring

## Wireless Video Cameras:

“Systems with a Digital Video Recorder (DVR) are very common in homes and businesses. Nowadays most individuals choose a wireless system that broadcasts live video on the 900MHz, 1.2 GHz, or 2.4 GHz. These consumer models rarely encrypt the signal and any generic video received can view the live stream. The FCC has assigned specific blocks of frequencies for the wireless channels used by these devices. Because of this, handheld receivers have been created that can scan all of these frequencies. They range in price from \$400-\$500. A decent unit with a quality antenna will display any wireless video being transmitted within an entire residential block.

While completely legal to view, using the collected video to blackmail, defraud, harass, stalk, or burglarize an individual is obviously illegal.”

## Wireless microphones:

These can be found transmitted throughout the radio frequency spectrum. Most often in the 42MHz, 70-74 MHz, 170-220 MHz, and 580-800 MHz ranges. Clear reception requires close proximity or use of directional antennas.

Room monitors: Frequencies often used for “baby monitors” these come in pairs ,one is a transmitter and the other a receiver that can be up to 1000 feet away. The channels assigned to these units fall into 3 ranges.

49MHz, older and cheaper, frequencies: 49.300, 49.830, 49.845, 49.869, 49.875, 49.890

The 900 MHz models are more popular. 902.000MHz – 908.000 MHZ, 923.000 MHZ-928.000MHz

The 2.4 GHz models are often encrypted and change frequencies sporadically, most basic scanners cannot monitor this range.

# Radio Frequency Monitoring

## Police Scanners:

Broadcastify.com has a plethora of live streams and is the most comprehensive database of radio frequencies that can be monitored on personal radios and scanners. One can listen in for free. There are also archived streams, but you must pay to access those, or else provide your own radio feed. You can find audio feeds in all parts of the country: large cities, small towns, and rural counties.

Radioreference.com is the most complete collection of current frequencies assigned to government agencies and private businesses on the internet. You can locate a set of frequencies based on a business name. Active channels can be monitored from several miles away using a basic scanning device.

The screenshot shows the Broadcastify homepage. At the top, it displays "Live Feeds - 6,464", "Total Listeners - 46,302", and "Top Listeners - Chicago Police (2,328)". There are "Log in" and "Sign Up" buttons, along with social media links for Facebook and Twitter. The main header is "Broadcastify". Below the header, there's a banner stating "The world's largest source of Public Safety, Aircraft, Rail, and Marine Radio Live Audio Streams." It features icons for Fire, Police, EMS, Aircraft, and Rail. A Uniden scanner is shown with a display screen showing "TRUNKTRACKER IV RC209ET" and various channel information. Below the banner are three buttons: "Listen" (Listen to 5000+ live audio streams for free), "Broadcast" (Broadcast your scanner to thousands of listeners for free), and "Connect" (Connect your agency or department to the public). At the bottom, there are sections for "MOBILE" (with download links for App Store and Google Play), "NEWS AND UPDATES" (listing recent events like Las Vegas shooting), and "PREMIUM SERVICES" (describing the benefits of a premium subscription).

The screenshot shows the Radioreference.com homepage. At the top, it has a "LOGIN • REGISTER • MOBILE • HELP" menu and a search bar. The main header is "RadioReference.com" with the tagline "Your Complete Reference Source". Below the header is a banner with a radio tower and the text "Welcome to Radio Reference". To the right of the banner, there's information about Premium Subscribers and a link to register. The main content area includes a "Reference Database", "Discussion Forums", "Wiki Reference", and "Live Audio" section. The "News and Announcements" section lists recent articles such as "Anti-encryption Bill Introduced In Colorado" and "Retirement Announcement: Jeff from The Ham Station". On the right side, there's a "Featured Item" section for the "Uniden HomePatrol-II Scanner" with a brief description of its features.

Search APIs and other topics will be covered at a future date on my site's blog.
